Worldwide Steel Buildings

“A DIFFERENT KIND OF BUILDING COMPANY”

Worldwide Steel Buildings offers complete, cost-effective steel building packages to meet your needs, with buildings for agricultural, residential, commercial, or industrial use. We pride ourselves on being “a different kind of building company”, one that manufactures its own products and has trained building consultants that are happy to prove that service is not just a word with us. Our consultants will help you design the most economical building that meets your specific requirements and work directly with our factory to get it delivered correct and on time. Our consultants won't stop there, they will follow up to make sure we have met your expectations and answer any questions you might have. Worldwide Steel Buildings is driven to be the best steel building company in the market, building trust and a reputation with our customers as a service driven company with a great product.

Worldwide Steel Buildings

We designed our buildings with the do-it-yourselfer in mind. All Worldwide Steel Building trusses are pre-punched and easily bolt together. Our purlin and girt clips are factory welded for ease of construction. All steel purlins and girts attach to the clips with self-drilling screws. Your sheet metal attaches to the purlins and girts with colored, self-drilling screws that are flanged and self-sealing to prevent leaks. We will also provide a step-by-step erection manual to guide you or your local contractor from start to completion of your building.

Standard Features on Worldwide Steel Buildings are high cost options with other building companies

How we build our Steel Trusses

All of our trusses are built with high quality American steel. Precision jig fitting tables are used in manufacturing all of our steel trusses to eliminate even the smallest variations to guarantee you a precise, easy to erect truss.

Each truss is 100% pre-welded and pre-punched at our factory, even the clips for the 2 x 6 purlins and 2 x 4 girts are pre-welded to greatly cut down on your valuable erection time. Only after all of these steps have been completed, then the finished truss is taken and completely submerged twice in a rust proof coating to insure your building truss a long maintenance-free life. All our trusses are backed by a 50 year warranty on materials and workmanship.

Building Size and Options

Buildings are available in widths ranging from 24' - 75' clear span and with sidewall height from 8' to 20'. For additional space, half-trusses are available in 12' - 37.5' widths to match your building. Self-supporting roof extensions are available in 1' - 14' widths. Either can be added before or after the erection of your building. Steel trusses are spaced to meet your local snow/wind load building requirements. Larger buildings are also available.

DO IT YOURSELF AND SAVE \$\$\$\$

Steel frame buildings with the do it yourselfers in mind. With our step by step erection manual and foundation guide that is provided for you with your building, you or your local contractor will be taken step by step from ground preparation, to adding the finishing touches to your new steel truss building.
